DESCRIPTORS: *Naphthenic acids, Acids, *Desiccants, Manganese, Calcium, Zinc, Iron, Lead, Preparation, Tests, Corrosion.

Distillation of acidol [crude naphthenic acids, in mixture with naphthenates] under a residual pressure of 50-15 mm. mercury was found in pilot plant experiments to give up to 83.8% light-colored naphthenic acids. A high activity of the combined manganese-calcium-iron siccative was established, exceeding that of the standard manganese-calcium siccative. (Engineering-Chemical, TT, v. 7, no. 10) (over)
